our waterways-our responsibility

Building Capacity for Community Involvement in Total Water Cycle Management

Creek to Coral is a combined Townsville and Thuringowa Local Government infrastructure-based initiative to maintain and enhance our healthy waterways in the coastal dry tropics.

Creek to Coral through its title, logo and network connectivity is expressive, relevant and locally unique, catalysing thinking from a 'whole of catchment' perspective, linking impacts from land based activities on the marine environment (Great Barrier Reef World Heritage Area).

The vision of this network based initiative is to achieve, sustain and promote the benefits of a clean, fresh and marine water ecosystem and to encourage, educate, facilitate and support integrated catchment management within a community framework.

Creek to Coral, is fundamentally focussed on engendering and building capacity for a holistic partnering approach, integrating community, government, science, business and industry.
